

10gen is the company behind MongoDB, the leading NoSQL database. MongoDB's open-source, document technology is popular among both developers and IT professionals given its agile and scalable approach. 10gen leads MongoDB development, supports the large and growing MongoDB community, provides commercial subscriptions including support, and offers consulting and training services. Additionally, 10gen provides the free, cloud-based MongoDB Monitoring Service (MMS).

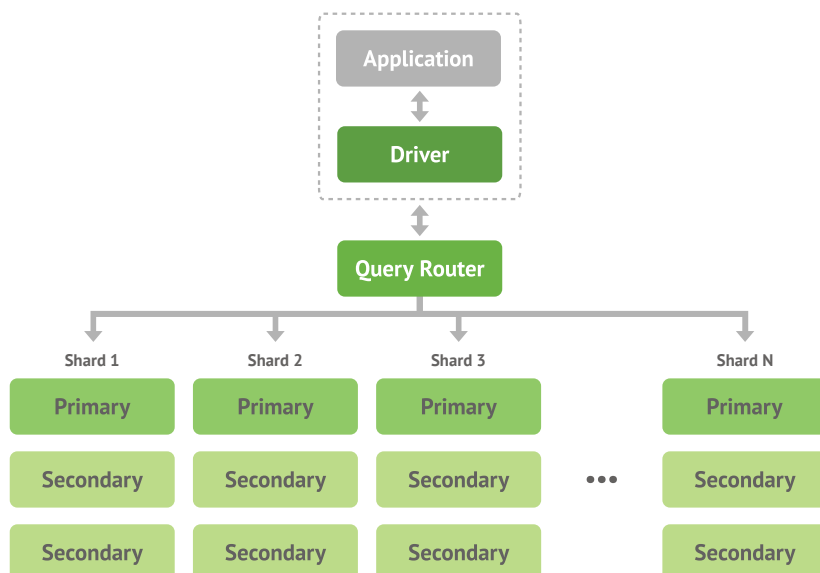

### MongoDB Overview

Organizations of all sizes use MongoDB to quickly and easily code, scale and operate applications. Instead of storing data in rows and columns as one would with a relational database, MongoDB stores a binary form of JSON documents (BSON).

Relational databases impose flat, rigid schemas across entire tables. By contrast, MongoDB allows schemas to vary across documents and to change quickly as applications evolve, while still providing the functionality developers expect from relational databases, such as secondary indexes and a full query language.

- » JSON data model with dynamic schemas
- » Auto-sharding for horizontal scalability
- » Built-in replication and high availability
- » Full, flexible index support
- » Rich document-based queries
- » Fast in-place updates
- » Aggregation framework and Map/Reduce
- » GridFS for large file storage

MongoDB is built for scalability and high availability. Auto-sharding allows MongoDB to scale from single server deployments to large, complex multi-site architectures. Built-in replication with automated failover provides enterprise-grade reliability and operational flexibility. MongoDB also provides a command line shell for interacting with the database, as well as drivers for most popular programming languages and frameworks to make development more natural.

Startups and enterprises are using MongoDB for a variety of use cases, like big data, content management and delivery, mobile and social infrastructure, user data management, data hubs and general purpose data stores across all verticals.

MongoDB not only enables organizations to build new types of applications, but also provides a number of other benefits, such as dramatically improved customer experience, time to market and total cost of ownership (TCO).

## MongoDB Monitoring Service (MMS)

MMS is a free cloud-based service provided by 10gen for monitoring MongoDB deployments in real time. MMS features charts, custom dashboards and automated alerting to track performance, utilization and other KPIs. It requires minimal setup and configuration, and within minutes devops and sysadmin teams can manage and optimize MongoDB deployments.

## MongoDB Subscriptions

10gen offers commercial subscriptions to help organizations get the most out of their MongoDB deployments. Production subscriptions include:

- » **MongoDB Subscriber Edition** – Provides current and future premium product features.
- » **Professional Support** – Includes enterprise-grade SLAs and access to 10gen's expertise and follow-the-sun support system.
- » **Commercial License** – Offers peace of mind to enterprises that may have restrictions around the AGPL.

10gen also offers Development Support for testing and development.

## MongoDB Consulting

10gen provides consulting services including Technical Account Managers (TAMs), Custom Consulting, Health Checks and Lightning Consults.

## MongoDB Training

10gen can help customers build, run and deploy applications on MongoDB through professional training. 10gen offers in-person training (public and private), workshops at MongoDB Days and free online courses.

## MongoDB Community

The global MongoDB community is large and growing, with over 3.8 million downloads, 50,000 MongoDB online education registrants, 15,000 MongoDB User Group (MUG) members, 14,000 MongoDB Monitoring Service (MMS) users and 10,000 annual MongoDB Days attendees.
